Intergenerational Epigenetic Inheritance of Cancer

Bluma J. Lesch, MD, PhD
Assistant Professor, Department of Genetics, Yale School of Medicine

Needs: Awareness of recent advances in epigenetics related to disease.

Objectives:
- Understand recent data about the role of the tumor suppressor Utx (Kdm6a) in tumorigenesis;
- Recognize the possible role of inherited epigenetic changes in disease susceptibility;
- Recognize different types of epigenetic marks and their relationship to gene expression.
