Each year there are 150,000 new cases of colorectal cancer diagnosed in the United States. Some **80% to 90%** are preventable. Come learn how you can prevent colon cancer and what your options are to treat it.

The educational seminar will feature three colorectal cancer experts:

Howard Hochster, MD, Clinical Program Leader of the Gastrointestinal Cancers Program at Smilow Cancer Hospital

James Farrell, MD, Associate Professor of Medicine (Digestive Diseases)

Xavier Llor, MD, PhD, Co-Director of the Cancer Genetics and Prevention Program at Smilow Cancer Hospital

They will discuss the risk factors for colorectal cancer, the importance of preventative screenings, especially for those 50-plus or individuals 45 or more who have a family history of gastrointestinal disorders, and the options for screening and treatment if lesions are found.
