CHANTEL F. PHEIFFER

BROWN UNIVERSITY, SOCIOLOGY

“The Gendered Relationship between Migration, Urban Living, and Blood Pressure in South Africa.”

Biography: Chantel Pheiffer is a sociologist who studies how processes of migration and urban living interact with systems of social stratification to produce—and reproduce—inequalities in maternal health, and in women’s health more broadly. Specifically, her dissertation examines the interaction between migration and gender as determinants of disparities in blood pressure among internal female migrants in South Africa who are often young mothers. Her work employs a variety of statistical methodologies and original survey data that follows migrants out of rural origin locations to urban destination places. Her work has been published in *Social Science & Medicine*, the *Journal of Biosocial Science*, and *BMC Public Health*. Chantel is a Ph.D. candidate at Brown University. She also holds an A.M in Global Development Policy from Boston University and a B.A. in Government from Smith College.
