eReg System Upgrade Notification

Dear eReg Users

You are receiving this notification because you currently have an active Regulatory Manager, Regulatory Coordinator or Multi-Site User Role in eReg. On Thursday, 1/6, our eReg production environment was upgraded from version 2021R2 to version 2021R3. Multiple new features are now available for use in eReg.

New Feature Highlights include:

eReg 2021R3	
Area:	Change:
IND	Added the ability to track information related to Investigational New Drug (IND) submissions in eReg. (This feature is only available to YCCI users maintaining IND submissions.)
Multi-Site Protocols	Users can now email correspondence directly to multi-site protocols.
Protocols	Added the ability to choose the columns that appear in the protocol staff table of a protocol.
SOPs	Can now associate SOPs with departments. By adding a department association, different departments can have their own unique SOPs, even if they are similar to those of other departments. Can also limit the SOPs available in a review session to those with departments that match the user's departments.

Please log into eReg and visit the Learning Portal > Release Highlights to learn more:
https://ereg-docs.forteresearch.com/index.php/Release_Highlights
(you must be logged in to eReg to view this page)

If you have questions regarding use of any new features or workflows, please contact eReg.support@yale.edu
