This live activity is approved for AMA PRA Category 1 Credits™.

COURSE DIRECTOR
Sharon S. Stoll DO, MS
Assistant Professor, Department of Neurology
Division of Multiple Sclerosis and Neuro-Immunology
Yale School of Medicine

LEARNING OBJECTIVES
~ Examine the current understanding of the genetics and pathophysiology of multiple sclerosis
~ Discuss new and emerging imaging modalities for MS patients and the risk benefit ratio of newer agents compared to older therapies
~ Review MS Covid registry data as well as vaccination during the time of COVID
~ NMOSD: Review of current and future disease modifying therapies
~ Explore current MS apps and technology to better educate and evaluate patients

Multiple Sclerosis (MS) is a chronic neurodegenerative disease of the central nervous system that affects the patient’s ability to move, think, and feel. worldwide, about 2.5 million people are affected. In the United States alone, almost 1 million individuals suffer from MS. There have been tremendous medical advances in the field of multiple sclerosis treatment in the past several years but much remains to be learned and understood. The goal of this webinar is to educate clinicians and other health professionals on advances in the diagnosis and management of patients with multiple sclerosis.

The presentations will enable participants to:
- Discuss the current understanding of the genetics and pathophysiology of multiple sclerosis
- Discuss new and emerging imaging modalities for MS patients and the risk benefit ratio of newer agents compared to older therapies
- Review MS Covid registry data as well as vaccination during the time of COVID
- Review NMOSD: Review of current and future disease modifying therapies
- Explore current MS apps and technology to better educate and evaluate patients
Multiple Sclerosis (MS) is the most frequent non-traumatic cause for disability among young adults in North America and Europe. Worldwide, about 2.5 million people are affected. In the United States alone, almost 1 million individuals suffer from MS. There have been tremendous strides taken in the field of multiple sclerosis over the past several years including new diagnostic criteria & new treatment strategies.

This webinar is designed to educate clinicians and other health care professionals on advances in the diagnosis and management of patients with multiple sclerosis.
