"Dark matter" of the genome comes to light

My lab has long-standing interest in genome stability, which is critical to maintain a healthy proliferative cell. This seminar will describe published and unpublished research regarding the function of centromeres and ribosomal DNA repeats in the human genome, facilitated in part by recent efforts of the T2T consortium to complete the human genome.

Monday, December 13, 2021

Via Zoom 99107640303
