Professor, Molecular Virology & Pediatrics

Baylor College of Medicine

“Mosquito saliva as a target for stopping the diseases they transmit”

The lecture will focus on the components of mosquito saliva and their immunologic and pharmacologic activities. These proteins/peptides are known to enhance infection and disease by pathogens carried by mosquitoes. Some of these components might offer new means to stop transmission of pathogens, especially arboviruses.

12:00 PM Thursday, March 5, 2020

47 College Street, Room 106B

Host: N. Grubaugh
