

# The Department of Molecular, Cellular and Developmental Biology Seminar Series Presents

## Julie Claycomb

*Canada Research Chair in  
Small RNA Biology*

*Associate Professor, Molecular Genetics  
University of Toronto*

### “Argonomics: Understanding the functions of small RNA pathways in a whole animal model”

Julie holds a longstanding interest in understanding how chromosomes are copied, built, and faithfully segregated during cell division. In addition, she has been fascinated by “non-canonical” means of regulating gene expression during animal development. Current work in the Claycomb lab centers around the biology of small non-coding RNAs and Argonaute proteins in the nematode *C. elegans*, and combines Julie's interests in chromatin, small RNA biology, and regulation of gene expression.

Wednesday, December 4, 2019

Yale Science Building O.C. Marsh Lecture Hall

260 Whitney Ave., New Haven

3:45pm Tea 4:00pm Seminar

Hosted by: Josien van Wolfswinkel

*Sponsored by the Mrs. Hepsa Ely Silliman Memorial Fund*
