| 10. This presenter should teach in next year's seminar.* |  | 100.00% | <b>2.00</b> | 0.0 |
|--|--|---------|-------------|-----|

11. Please comment on specific ways in which to improve this session.

This was probably one of my favorite seminars that we've had so far (though I may be biased since I love juvenile justice work). It was really nice to hear about Dr. Brown's story and the work she is doing. However, I think less time could have been spent on the juvenile justice system and its innerworkings. Instead, I would have loved more time with the case conceptualizations. I love opportunities to apply our perspective as psychologists to interactions with other systems and it was really fun to discuss the cases she was bringing.

The intro part was a bit lecture-heavy if it's possible to either shorten or incorporate more interaction in the first part.

It was unclear to me how to this session (aside from just providing new information) could be related to my practice as a clinical psychologist not in a justice setting or was related to my skill development on internship. It could be helpful to discuss the ways in which we might interface with the justice system in our various roles, discuss practical strategies to coordinate with the justice system or affiliated providers, etc.

Have 2 sessions!

N/A

12. Please comment on specific strengths of this session:

Dr. Brown was great and engaging! She was very knowledgeable about this topic.

I liked talking through the case and asking clarifying questions as a group

There was something about Dr. Brown's delivery that made me feel like I wasn't being "lectured at" which was refreshing. She seemed down to earth and interested in sharing what she does leaving me interested in learning about it!

This was a wonderful session that was simultaneously interactive, informative and enjoyable. Hopefully this presenter can return for a part 2

Amazing presentation. It was engaging, informative, and helpful. It really provided the cohort with the reality of what working in juvenile mental health programs is like and the obstacles faced when trying to balance the system while maintaining a person-centered/strengths based approach.

very useful information!

This was a great session, I especially enjoyed the case-based component which was more interactive, engaging, and demonstrated the material well.

Dr. Brown was very engaging and greatly utilized case examples which got us interested and thinking clinically within her treatment context.
