Addressing Social Determinants and Health-Risk Behaviors to Reduce Cancer Burden and Eliminate Cancer-Related Disparities

Hermine Poghosyan, PhD, MPH
Associate Professor, Yale School of Nursing

Needs: Although national, state, and local governments have given increased attention to health disparities in recent years, the progress in reducing and eliminating health disparities is not substantial. Objectives: Describe the prevalence of lung cancer screening among adults at high risk for developing lung cancer. Discuss challenges and opportunities for tobacco treatment among adults with a history of cancer diagnosis.
