Biography: Joshua Jeong, ScD is a developmental scientist and Research Associate in the Department of Global Health and Population at the Harvard T.H. Chan School of Public Health. He studies how parents and family environments influence the health and development of young children, with a focus on the role of men as parents and partners in low- and middle-income countries. He collaborates with interdisciplinary researchers; NGOs and governments in Tanzania, Kenya, Mozambique, and Pakistan; international foundations; and multisectoral agencies to generate evidence that can facilitate the dissemination of effective parenting interventions within global health platforms. Currently, his grants as principal investigator includes an NICHD K99/R00 award to design and evaluate the feasibility, effectiveness, and implementation of a community-based men’s group intervention to enhance fathers’ parenting, couple's relationships, and early child outcomes in Tanzania. He received a BS in human development from Cornell University and ScM and ScD in global health and population from Harvard University, where he also completed a postdoctoral fellowship in implementation science.
