“Evaluating the impact of enteric vaccines in LMICs: Lessons from rotavirus and typhoid fever”

Enteric diseases are a leading cause of morbidity and mortality worldwide, particularly among children in low- and middle-income countries (LMICs). In this talk, I will discuss how my group uses statistical and mathematical modeling approaches to better understand the impact of vaccines against rotavirus diarrhea, and to generate evidence to support the introduction of vaccines against typhoid fever in LMICs.

12:00 PM Wednesday, September 30, 2020

Host: N. Grubaugh/R. Heimer/B. Weiss
