Prevalence and Correlates of Undiagnosed Diabetic Retinopathy in the United States: Evidence from the National Health and Nutrition Examination Survey (2005-2008)

Presented by
Kristen Nwanyanwu, MD, MBA
Assistant Professor, Vitreoretinal Surgery
Yale School of Medicine

Diabetic retinopathy is one of the leading causes of preventable blindness. Early detection provides a path towards saving vision. Those that have diabetes and do not know they have retinopathy are at high risk for vision loss. Our study uses a national database to determine the prevalence of the population undiagnosed diabetic retinopathy. Information about the population with undiagnosed disease provides a foundation for an intervention to reach those at the highest risk for blindness.

Tuesday, January 28, 2020
12:00 PM (lunch incl.)
Room 115 – LEPH
60 College St.

Required for 1st yr CDE students
Open to all CDE students
