

Acoustic Neuroma Support Group

The diagnosis of an acoustic neuroma can be unique and challenging for a variety of reasons. These tumors, though outside the brain and typically “benign,” can be anything but. They significantly impact a patient’s quality of life with impaired hearing, balance, and facial movement, among other important functions.

At the Smilow Brain Tumor Center, we are privileged to care for a high volume of patients with acoustic neuromas and appreciate our patients’ concerns. As such, we are poised to bring patients with acoustic neuromas together, along with their friends and families, to discuss commonalities and ways to improve quality of life.

Thursday, September 26, 2019
5 - 6:30 pm

Yale School of Medicine
Sterling Hall of Medicine, I-116
333 Cedar St., New Haven
