“Strengthening Economic Evaluation of Multisectoral Complex Approaches for Improving Maternal and Child Nutrition: Application of the SEEMS Nutrition Approach” Part 2 of a Two-Part Seminar

Carol Levin, PhD

Clinical Associate Professor

Department of Global Health
University of Washington

Thursday, December 3, 2020

12:00 - 1:00 PM

Via Zoom

Dr. Carol Levin, a health economist, is an associate professor in the Department of Global Health at the University of Washington. Her research focuses on the costs and cost-effectiveness of introducing and scaling up public health interventions and new technologies related to reproductive, maternal and child health and nutrition interventions, including HIV/AIDS, TB and vaccine preventable diseases. Previously, she provided technical guidance and coordinated the economic analysis for the Disease Control Priorities Third Edition—a nine-volume series aimed at strengthening evidence-based priority setting in health and nutrition. She recently completed the Global Health Cost Consortium that developed online tools to support improved cost estimates for HIV and TB planning, budgeting and economic evaluation. She also conducts research on food security, health and nutrition, with a particular focus on the intersection between agriculture, food systems, and health and nutrition outcomes. She is currently the director of the project “Strengthening the Economic Evaluation of Multisectoral Strategies for Nutrition (SEEMS-Nutrition).”
