

When Data Isn't Enough: Health, Science, and Climate Advocacy

Kim Knowlton, DrPH

Senior Scientist, Natural Resources Defense Council
Assistant Professor, Environmental Health Sciences,
Columbia University's Mailman School of Public Health

Dr. Knowlton specializes in the human health impacts of climate change, served as co-convening lead author for the human health chapter of the U.S. Third National Climate Assessment, as a member of the 2nd and 4th New York City Panels on Climate Change, and participated in the Intergovernmental Panel on Climate Change's Fourth and Fifth Assessment Reports. Her work with the New York Climate and Health Project described some of the first downscaled global-to-regional, climate-health assessment modeling in the U.S. She now works with community partners in the U.S. and India to connect the dots between climate and health, limit climate-health harms, and put science in the service of advocacy that protects people and the planet.

**In-person at 47 College St., Room 106B and
online via Zoom**

**Monday, February 28, 2022
12 to 1 PM**
