“Evaluation of a Package of Essential Non Communicable Diseases (PEN) in Nepal - An Implementation Study”

Archana Shrestha, PhD

Associate Professor

Department of Public Health

Kathmandu University School of Medical Sciences

Assistant Professor Adjunct

Department of Chronic Disease Epidemiology

Yale School of Public Health

Monday, May 2, 2022

12:00 - 1:00 PM ET

In person and via Zoom

Location: 60 College St, LEPH 105

Dr. Archana Shrestha is a PhD trained epidemiologist with substantial expertise in implementation science, data analysis, and research methodology in low-income settings. She is interested in developing, testing, and implementing preventive interventions to reduce the impact of noncommunicable disease (NCD) epidemics in low-income countries. She has been involved in community-based health program development, implementation, research, and education in Nepal for the last ten years. She is the project co-director of an NHLBI T34 grant on capacity building for translational research to address cardiovascular diseases in Nepal and the former chair of the Global Research on Implementation and Translation-Coordination Committee. She is also the country director for the Nepal for the Northern Pacific global health research fellows training consortium. She leads multiple implementation science research projects to prevent NCDs, including cervical cancer, cardiovascular diseases, and diabetes, in low-income settings.
