

Smilow Cancer Genetics and Prevention Program Seminar Series

Thursday, January 16 | 1:00pm - 2:00pm

[Join by Zoom](#)

“Developing Interventions for Primary Prevention of Breast Cancer that Women will Take”

Carol J. Fabian, MD

Director, Breast Cancer Prevention and Survivorship Research Center, Medical Oncology, University of Kansas Comprehensive Cancer Center;
Mark and Bette Morris Family Professorship in Cancer Prevention, Mark and Bette Morris Foundation, University of Kansas Medical Center

Dr. Carol Fabian is a breast medical oncologist and a University Distinguished Professor at the University of Kansas Medical Center. Dr. Fabian's current practice is limited to breast cancer risk assessment, genetic testing and breast cancer prevention, as well as treatment of non-invasive breast cancer. She is heavily involved in clinical and translational research in breast cancer prevention and survivorship. Her prevention focus for high-risk women who have not developed breast cancer is on healthy behaviors and other interventions which do not induce or worsen menopausal symptoms. She is committed to a patient-focused and multidisciplinary approach to treatment planning based on patient-specific biology, latest research developments and patient wishes.
