- The Asthma SmartForm is available under SmartForms from the Action Menu.
 - From the Action Menu choose Classic SmartForms
 - A dialog box appears with the list of available Encounter SmartForms
 - Select Asthma

All available Classic SmartForms:

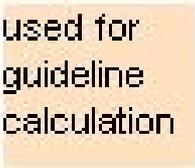

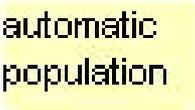

-  Hem/Onc
-  Pulmonology
-  Asthma
-  Transition to Adulthood
-  Weight Management

- Before the SmartForm opens a dialog box appears asking “Is this a new patient?”
 - Click “Yes”, if this is an initial asthma visit
 - Click “No” if the patient was seen previously for Asthma

- The Asthma SmartForm contains 7 sections:
 - **HPI:** this section documents the history of present illness
 - **Past Hx's:** this section shows the birth history, past medical, surgical, and family history
 - **Exam:** documentation of the exam elements (i.e. HEENT, chest, abdomen, extremities, neurological)
 - **Medication:** lists all current medications
 - **Assessment:** determination of guideline based asthma severity and control
 - **Action Plan:** creates and prints an Asthma Action Plan
 - **Education:** documentation of education delivered at the visit

- Responses are color-coded to indicate the source of information

Legend	
 used for guideline calculation	Field used in calculation of severity and/or control based on NHBLI guidelines
 automatic population	Pulled from the patient's electronic medical record

- Helpful Hints:
 - Do not click the “Accept” button until data entry is complete. Clicking “Accept” will close the SmartForm. To navigate through the sections of the SmartForm, click on the Tabs at the top.
 - When “N/F” appears in a pulled field, no value was found.

- Data elements can be stored as patient level or encounter level.
- Patient level elements are entered once and updated only as necessary.
 - For example, if patient has never been intubated previously, choose “no” from the drop-down list.

previous intubation

- Unless changed after consultation with patient and caregiver, the data field will remain “no” on each subsequent visit.
- Encounter level elements are entered at each visit.
 - Examples of encounter level elements are the physical exam findings.

- Symptom history and frequency (patient level)
 - Hospitalizations are patient level and represents a cumulative total. For example, if a patient is hospitalized twice since the last visit, add 2 to the number of hospitalizations from last visit and enter the date of the last hospitalization.
- Environmental triggers (patient level)
 - Check known asthma triggers, if any.
- Impact (encounter level)
 - Impact of asthma on activities of daily living
- Medication use (encounter level)
 - Use of SABA, degree of adherence and barriers
- Environmental history (encounter level)
 - Exposure to smoke and pets
- ACT score, if completed at the visit (encounter level)

- The Childhood Asthma Control Test (C-ACT or ACT) developed by Andrew H. Lui et al¹ is a validated instrument used as a measure of asthma control. Two versions of the questionnaire are available:
 - Childhood Asthma Control Test (age 4 -11)
 - Childhood Asthma Control Test (age 12 and older)
- Total score is calculated and entered under the ACT Score in the HPI section.

ACT Score

≥ 20 well controlled
16-19 not well controlled
 ≤ 15 very poorly controlled

¹ Liu AH, Zeiger R, Sorkness C et al. Development and cross-sectional validation of the Childhood Asthma Control Test. *J Allergy Clin Immunol* 2007 April;119(4):817-25.

- The Exam Tab is divided into two subsections: HEENT and chest/abd/extrem/neuro.
- Check **Normal HEENT** to indicate all HEENT elements are normal. Check **Normal chest/abd/extrem/neuro** to indicate all chest, lungs, heart, abdomen, extremities, skin and neurological exam elements are normal.
- Uncheck the Normal box to clear all “normal” exam elements. Individual items checked will remain checked.
- Each physical exam item can be changed individually.
- An exam note is built as items are checked:

- The Provider documents chest x-ray and PFT results. A note summarizing these results is built in the Diagnostic/Imaging box on the right side of the Assessment tab.

Diagnostic/imaging

Asthma has had a chest x-ray performed since the onset of respiratory symptoms. Chest x-ray was reviewed at today's visit and film indicated hyperinflated, and diffuse interstitial changes. Focal opacification present in the right middle lobe.

- The assessment is populated based on the control and/or severity classifications determined at the visit. The Provider enters the Plan.

Assessment

Asthma's initial asthma classification is severe. Today's examination indicates her asthma is very poorly controlled.

Plan

- Based on the information entered, the patient's severity and control are calculated.
 - Entry of at least 1 element is required for calculation
 - The most severe entry selected dictates the final calculation
 - The calculated severity and control appears under “Guideline assessment today”

The screenshot shows a form with the following sections:

- Initial severity**: A dropdown menu with "moderate" selected and a checkbox for "severity reassessed today".
- Guideline assessment today**: Two dropdown menus. "severity" is set to "severe" and "control" is set to "very poorly controlled".
- Clinician assessment**: A dropdown menu for "control today" set to "very poorly controlled".
- A button labeled "Accept calculated control?" with a mouse cursor over it.

Note populated based on entries.

Assessment

Asthma's initial asthma classification is severe. Today's examination indicates her asthma is very poorly controlled.

- Severity (patient level)

- The severity classification from the initial visit appears.
- Periodic re-assessment may be needed. If severity is reassessed, change severity classification (if appropriate) and check the box “severity reassessed today”.

Initial severity

moderate severity reassessed today

- Control (encounter level)

- Click on “Accept calculated control?” to accept NHLBI guideline calculation of control **OR** choose the appropriate control classification under Clinician assessment.

Guideline assessment today

severity severe

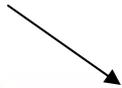

control very poorly controlled

Clinician assessment

control today very poorly controlled

Accept calculated control?

Click here to review the recommended treatment

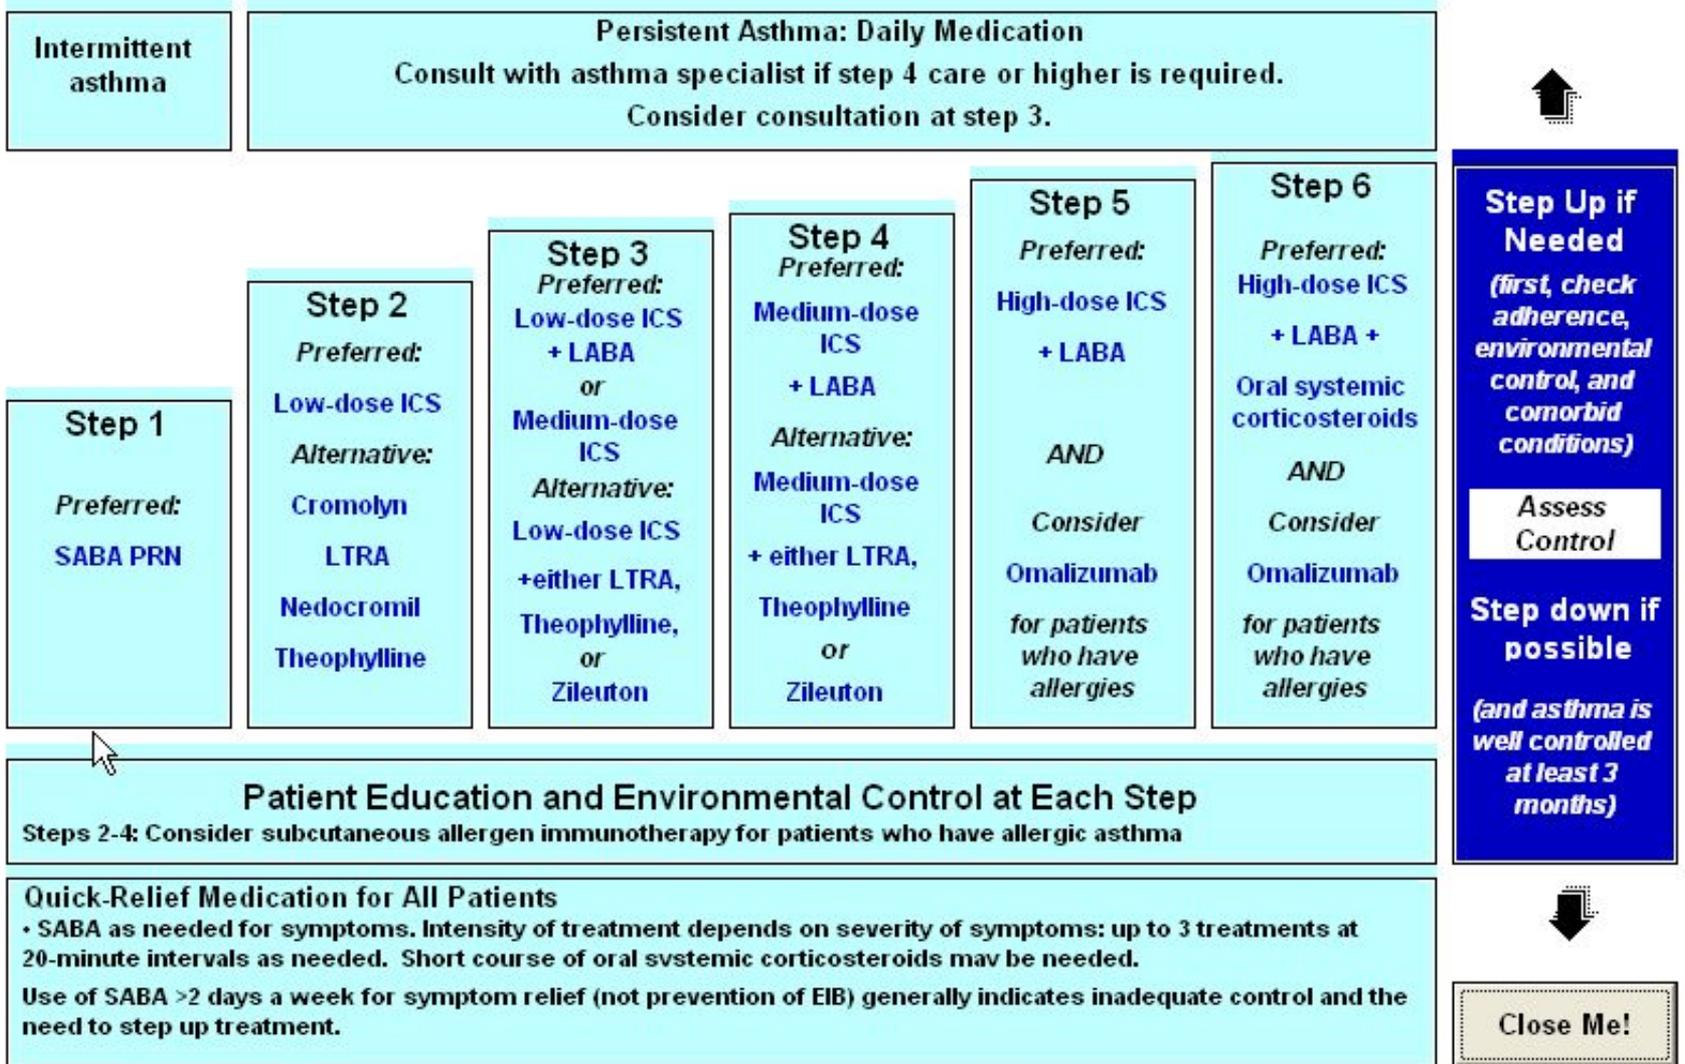

To review NHLBI stepwise treatment, click here

NHLBI guidelines suggest a stepwise approach. Step 3 or 4 should be considered for severity classified as moderate, assuming the patient is well controlled.

After determining the patient's severity and/or control, this box appears with the NHLBI guideline recommendation for treatment.

STEPWISE APPROACH FOR MANAGING ASTHMA IN YOUTHS ≥ 12 YEARS OF AGE

Step 3
Preferred:
**Low-dose ICS
+ LABA**
or
**Medium-dose
ICS**
Alternative:
**Low-dose ICS
+either LTRA,
Theophylline,
or
Zileuton**

Click on the **blue** hyperlinked text to review medication dosing.

Excerpts from the NHLBI Guidelines appear:

Use menu to view other excerpts

The screenshot shows a web application interface. On the left is a navigation menu with a tree structure under 'Inhaled steroids'. The main content area displays 'Excerpts from: NHLBI Expert Panel Report 3 Guidelines for the Diagnosis and Management of Asthma - Full Report 2007'. Below this is a table titled 'FIGURE 4-4 a. USUAL DOSAGES FOR LONG-TERM CONTROL MEDICATIONS IN CHILDREN* (CONTINUED)'. The table has columns for Medication, Dosage Form, 0-4 years, 5-11 years, and Comments. The only row shown is for Theophylline under the Methylxanthines category.

Medication	Dosage Form	0-4 years	5-11 years	Comments
Methylxanthines Theophylline	Liquids, sustained-release tablets, and capsules	Starting dose 10 mg/kg/day; usual maximum: <ul style="list-style-type: none"><1 year of age: 0.2 (age in weeks) + 5 = mg/kg/day≥1 year of age: 16 mg/kg/day	Starting dose 10 mg/kg/day; usual maximum: 16 mg/kg/day	<ul style="list-style-type: none">Adjust dosage to achieve serum concentration of 5-15 mcg/mL at steady-state (at least 48 hours on same dosage).Due to wide interpatient variability in theophylline metabolic clearance, routine serum theophylline level monitoring is essential.See next page for factors that can affect theophylline levels.

- Complete the action plan by entering the appropriate medication, dosing and timing for the **Green Zone** (Doing Well), **Yellow Zone** (Getting Worse) and **Red Zone** (Medical Alert).
- Click on the  button. The customized action plan is printed and the “Action plan given” box is checked.
- For all subsequent visits, the fields are pre-populated from the last visit. If there are no changes since last visit, check the box “Action plan reviewed this visit with no changes”.

Nemours Asthma Action Plan - Symptoms

Doing Well

Breathing is good
Can work and play

No cough or wheeze
Sleeps all night

This is where you should be every day. Take these medicines daily:

Pulmicort Respules 0.5 mg 1 vial nebulized 1 time per day
Foradil Aerolizer 12 mcg 2 capsules 1 time per day
Symbicort 80/4.5 1 puff 2 times per day
Methylprednisolone 4 mg 2 tablet 2 times per day
5 minutes before exercise take Xopenex HFA 45 mcg 1 puff

Getting Worse

Some problems breathing
Problems working or playing

Cough, wheeze or chest tightness
Awakening at night due to asthma

This is not where you should be every day. You need to take action to get your asthma under control.

Begin quick relief medicine in addition to daily medicines:

Albuterol 0.083% (3 mL) 3 vials nebulized 3 times per day

If you feel better in 20 minutes and relief lasts 4 hours then take:

Ventolin HFA 90 mcg 3 puffs 3 times a day for 2-3 days

If you don't feel better in 20 minutes take your quick relief medicine again.

If you still don't feel better after 2nd dose of quick relief, take another dose and call your doctor.

If you feel better, but relief doesn't last 4 hours start:

Proventil 90 mcg/metered inhalation 3 puffs 3 times a day for 2-3 days

Change daily medicine to:

Flovent HFA 110 mcg/inhalation 2 puffs 3 times per day

Additional yellow zone instructions can be place here. You can tell patient to call you or not take another dose or take three additional doses. Whatever you would like to say.

- This section is used to document education provided at the visit.
- If the education is delivered, check the box next to item. The current date appears in the box to the right. The date field is patient level and appears in the box until the next time that item is discussed and checked in the SmartForm.
- Based on the patient's asthma triggers entered in the HPI tab, appropriate environmental control measures are highlighted.

Environmental control measures

Highlighting indicates this is a known asthma trigger

<input type="checkbox"/> get rid of furry pet or bird	
<input type="checkbox"/> place dust mite covers on mattress/pillows	
<input type="checkbox"/> remove fabric window coverings	
<input type="checkbox"/> remove feather or wool bedding

- Summary Notes are built as the provider completes the SmartForm and appear throughout the SmartForm
- These Summary Notes provide a preview of the text that appears in the Progress Note.

Examples:

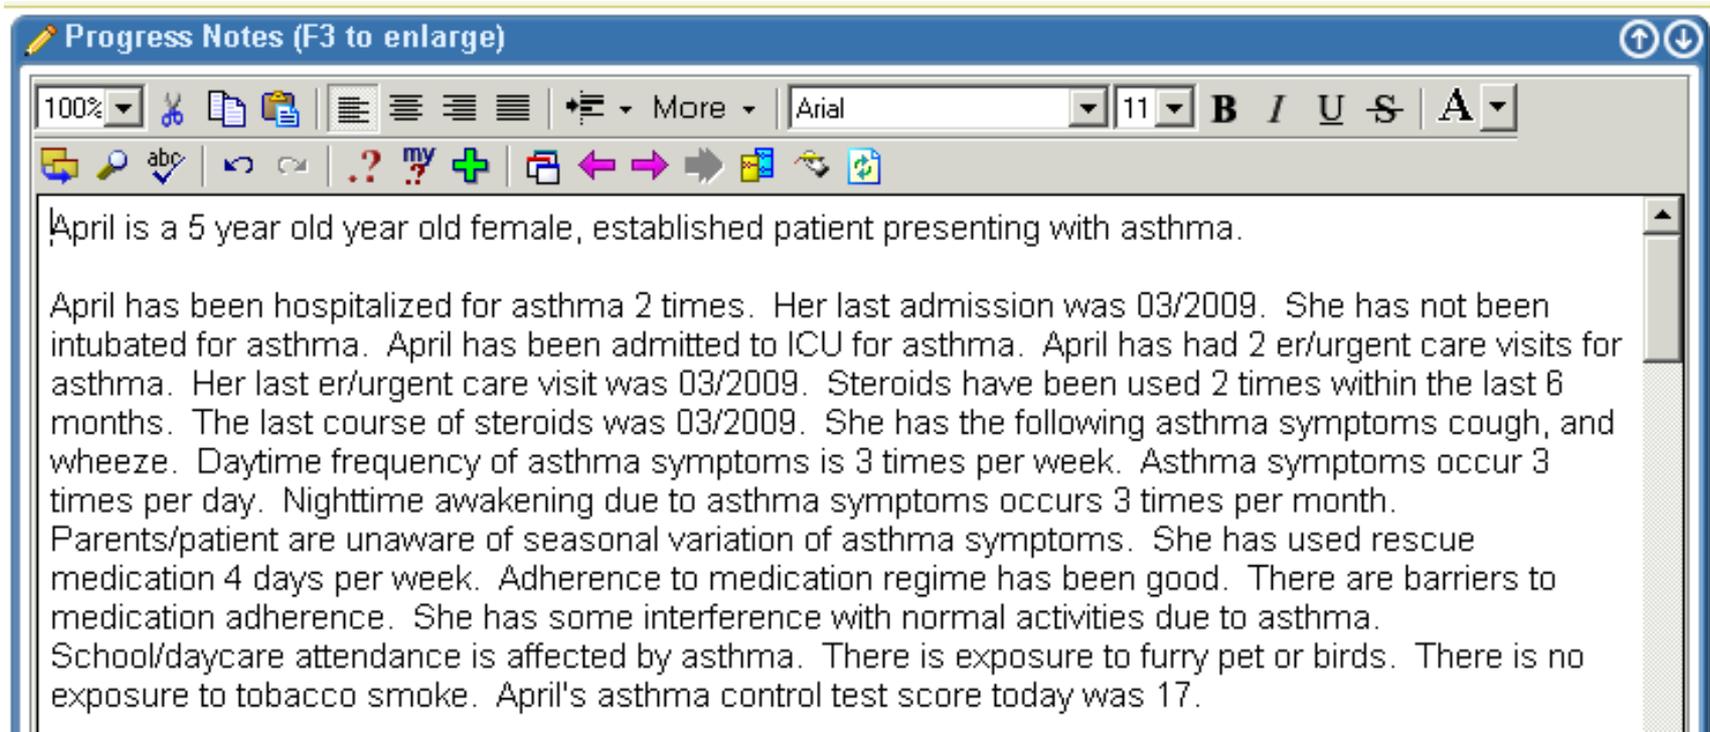

Assessment

Asthma's initial asthma classification is severe. Today's examination indicates her asthma is very poorly controlled.

Diagnostic/imaging

Asthma has had a chest x-ray performed since the onset of respiratory symptoms. Chest x-ray was reviewed at today's visit and film indicated hyperinflated, and diffuse interstitial changes. Focal opacification present in the right middle lobe.

- Open Progress Notes and click on the Insert SmartText icon. Type in the name of the SmartText (Asthma SmartForm), select and click accept.
- The SmartText builds the Progress Note based on entries in the SmartForm. The provider reviews the note and make any changes or additions if needed.
