TUESDAY, December 6, 12:00pm
55 Park St., Smilow Auditorium | Zoom Access
Hosted by the Melanoma Program

Epigenetic regulation of immune evasion and drug resistance in melanoma and beyond

Qin Yan, PhD
Professor of Pathology; Co-Leader, Genomics, Genetics, & Epigenetics Research Program

Needs: The roles of epigenetic regulation in immune evasion and drug resistance by cancer cells, and the development of drugs to target epigenetic regulators. Highlight basic and translational research that led to the discovery of new roles of KDM5B histone demethylase in melanoma.

Objectives: Understand the importance of epigenetic contribution to cancer initiation and progression. Learn the roles of KDM5B histone demethylase in melanoma. Recognize new therapeutic avenues for cancer treatment.
